DETAILED ACTION

1. Receipt is acknowledged of the response filed on 22 December 2005, which has been entered in the file.

Allowable Subject Matter

2. Claims 2-17, 21 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Although, the best prior art of record to Shreesha (US 5,798,516) and Nelson et al. (US 6,688,525) teaches a portable scanning device has a function of focusing the target image onto the detector such as CCD for capturing the barcode image and decoding captured barcode image by the actuator. However, Shreesha and Nelson et al. taken alone or in combination with other reference fail to particularly teach that the imaging device comprises two piezo actuator assemblies in opposing direction and in contact with a longitudinal flange extending from the lens assembly, and the method of focusing the image with the imaging system moves the lens assembly to focus the target image onto the image sensor using a piezo assembly wherein the moving distance is determined according to current position of the lens assembly respect to the position of the lens guidance assembly and the determined distance correlated between distance to the target image and a position of a lens guidance assembly as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
